Задание 1: Письменно переведите текст на русский язык. Сформулируйте и запишите 10 вопросов на английском языке по его содержанию. Желательно в электронном виде)))

IT management

IT management is the discipline whereby all of the information technology resources of a firm are managed in accordance with its needs and priorities. These resources may include tangible investments like computer hardware, software, data, networks and data centre facilities, as well as the staff who are hired to maintain them.

Managing this responsibility within a company entails many of the basic management functions, like budgeting, staffing, change management, and organizing and controlling, along with other aspects that are unique to technology, like software design, network planning, tech support etc.

The central aim of IT management is to generate value through the use of technology. To achieve this, business strategies and technology must be aligned.

IT Management is different from management information systems. The latter refers to management methods tied to the automation or support of human decision making. IT Management refers to IT related management activities in organizations. MIS is focused mainly on the business aspect, with a strong input into the technology phase of the business/organization.

A primary focus of IT management is the value creation made possible by technology. This requires the alignment of technology and business strategies. While the value creation for an organization involves a network of relationships between internal and external environments, technology plays an important role in improving the overall value chain of an organization. However, this increase requires business and technology management to work as a creative, synergistic, and collaborative team instead of a purely mechanistic span of control.

Historically, one set of resources was dedicated to one particular computing technology, business application or line of business, and managed in a silo-like

fashion. These resources supported a single set of requirements and processes, and couldn't easily be optimized or reconfigured to support actual demand. This led technology providers to build out and complement their product-centric infrastructure and management offerings with Converged Infrastructure environments that converge servers, storage, networking, security, management and facilities. The efficiencies of having this type of integrated and automated management environment allows enterprises to get their applications up and running faster, with simpler manageability and maintenance, and enables IT to adjust IT resources (such as servers, storage and networking) quicker to meet unpredictable business demand.

The importance of IT management is to understand managing data. There are also difficulties IT managers must overcome. The amount of data is increasing and most of the data is collected by different departments and separated between organizations. This implies that they may not be using the same method or procedure. Data security, quality and integrity is the most informant in receiving information. The sources have an impact also on the sources obtained; they may be internal or external. When the information structures do not transfer properly with each other, that can result in unreliable data. An important part to understand in an IT management is Data Governance. It is an approach to managing information across the entire organization or company.

Грамматика

Задание 1: Повторите грамматическую тему «перевод предложений из действительного залога в страдательный». Используйте дополнительные источники информации. Письменно выполните упражнение, расположенное ниже.

Transform from Active to Passive

1. The police fined <u>the driver</u> for speeding.
2. People have sent <u>her</u> a lot of birthday cards.
3. The lights went out when they were serving <u>the meal</u>.
4. Journalists asked <u>the prime minister</u> a lot of difficult questions.
5. Nobody has told <u>me</u> what to do.
6. The police were following <u>him</u> until he came home.
7. They didn't ask <u>him</u> about the accident.
8. James Cook will read <u>the news</u> today.
9. The police are questioning <u>the men</u> about last month's bank robbery.
10. Two reporters from *Washington Post* uncovered the scandal.
11. According to the report crocodiles attack <u>people</u> every week.
12. The parliament has passed <u>the law</u> about TV stations today.
